HOW IT WORKS [Insert Graphics]

[Insert Brand Name/ Glyphosate/ This product] [is absorbed by the weed's leaves/ enters plants through the foliage] [or freshly cut woody stumps]. It moves through the weed to the root, stopping the function of an essential enzyme found in plants [,but not in humans].] [The second active ingredient, triclopyr, penetrates waxy leaves.] [Both glyphosate and triclopyr [can] cause weeds to begin to yellow and wilt [as fast as/ within] [24] hours, with complete kill in 1 to 2 weeks [for [most/ annual] weeds].] [Some [established/ hard-to-kill/ perennial] weeds [such as poison ivy] may take 4 or more weeks for complete kill.] [Weeds die, roots and all – so they don't grow back.] [Individual results may vary.]

HOW TO APPLY [Insert Graphics]

- Adjust [sprayer] nozzle to the desired spray setting.
- Spray the weeds, grasses or brush you want to kill until **thoroughly wet**.
- Spot treat or spray evenly each gallon of spray solution over 300 sq ft. Do not exceed the maximum yearly application rate of 61 fl oz product per 300 sq ft (9 lb triclopyr per acre).
- When spot treating [weeds] around desirable plants, shield plants from drift with a sheet of cardboard or plastic. If desirable plants are accidentally sprayed, rinse off immediately with water [or cut off treated area].

IMPORTANT: Do not spray plants or grasses you like – they will die. Not recommended for spot weed control in lawns since [this product/ Insert Brand Name] kills lawn grasses. [Do not allow treated weeds to come in contact with desirable plants until spray has dried.]

Optional Section: Select Any of the Options Below

[For] Poison Ivy & Poison Oak:

Spray until thoroughly wet when plants are actively growing, but at least 4 weeks before the first killing frost in the fall. Reapply if new growth appears. Contact with these plants anytime of the year can cause an allergic reaction. Handle dead plants with rubber gloves. Dispose of plants and rubber gloves in tightly sealed garbage bags.

[For] Wild Blackberry:

Spray until thoroughly wet when plants are actively growing. Dead canes should be cut down and removed. Reapplication is often required to kill deep roots.

[For] Kudzu:

For best results, apply in mid to late summer when vines are mature and actively growing. Spray vines thoroughly.

To Kill Vines *Alternative Text:* [For/ Vine Treatment]:

- [If vines are growing up poles, fences, or tree trunks with mature bark, cut vines to a height of 3 to 4 feet and spray vines thoroughly.]
- [If vines are climbing shrubs or immature tree trunks with green bark, cut vines at base and treat as directed for stumps or spray regrowth. If spraying regrowth, shield shrubs and immature tree trunks from spray drift with a [sheet/ piece] of cardboard or plastic.]

To Kill Stumps

[This treatment will control or suppress many types of woody brush and trees, such as alder, bluegum eucalyptus, madrone, oak, giant reed, saltcedar, sweetgum, and tan oak.]

- [Cut living stump close to ground. Drill 4 to 5 holes into freshly cut stump and immediately pour undiluted product into holes. For smaller stumps, apply undiluted product with a paint brush immediately to the entire freshly cut stump, including the cut surface, remaining trunk & exposed roots. Do not reuse paint brush. Wrap brush in newspaper and put in trash.]

[IMPORTANT: Some trees may share the same root system. Adjacent trees having a similar age, height and spacing may signal a shared root system. Injury may occur to non-treated trees when one or more trees sharing common roots are treated.]

[For] Bamboo:

[Cut canes close to ground. Make cut just below a stem joint to create a hollow stem reservoir. Pour 2 Tbs of undiluted product into the hollow stem reservoir. Browning of the canes will occur in 7-14 days. Spray foliage if regrowth occurs.]

WHEN TO APPLY [Insert Graphics]

- Apply when weeds, grasses or brush are actively growing. ***Alternative text:*** [Use anytime weeds, grasses or brush are actively growing.]
- For best results, apply during warm, sunny weather above 60° F [to accelerate systemic movement from foliage to roots].
- [Apply/ Spray] when air is calm to prevent drift to desirable plants.
- RAINPROOF [Protection:]: Rain or watering 30 minutes after application will NOT wash away effectiveness. ***Alternative Text:*** [Insert Brand Name] is Rainproof in 30 minutes.]
- [Some established [perennial/ hard to kill] weeds may require a repeat application.] ***Alternative Text:*** [Repeat application if necessary, should new growth appear.] [Do not apply more than 61 fl oz product per 300 sq ft in a year from all applications.]
- [[Note:] Brush sprayed in the fall may not be controlled until the following season. In the spring, spray regrowth if it occurs.]
- [Apply when weeds are small and before seeds form.]

APPLICATION RESTRICTIONS: Do not apply this product in a way that will contact any person or pet, either directly or through drift. Keep people and pets out of the area during application.

User Safety Recommendations:

- Non-conifer trees and shrubs may be planted **14 days after** application.
- Conifer trees and shrubs may be planted **30 days after** application.

Calculation of Spray and Weed Coverage

- To determine approximate quantity of spray solution by container, divide the net contents in fluid ounces by 6 fl oz per gallon. ($Y = \text{Net contents (fl oz)} \div 6 \text{ fl oz}$)
- To determine how many square feet can be treated, multiply Y (gallons of spray solution) by 300 ($X \text{ spray coverage} = Y \text{ gallons of spray solution} \times 300 \text{ sq ft}$)

NET CONTENT/ SKU Size	Spray Coverage (X)	Spray Solution (Y)
XX FL OZ (QT or GAL) (ml or L)	Net Contents (fl oz) \div 6 fl oz = Y; multiply Y by 300 = approximate treatment area in sq ft	Net contents (fl oz) \div 6 fl oz
6 FL OZ	300 sq ft	Makes 1 gallon
8 FL OZ	400 sq ft	Makes 1.33 gallon
